SMART SERVICES

- Find parking
- Real-time bus, bike share transit info
- Interactive digital kiosks
- Wayfinding applications

SMART CAMPUS ID

- Universal payment card
- Bus token
- Smart locks/access control

SMART SECURITY & SAFETY

- Video surveillance
- Asset tracking
- Smart locks/physical access
- Access control

Smart Living

Smart ID cards

In-building LTE

Smart lighting

Smart parking / transit

Wayfinding

Personal networks

Smart Learning

Flexible Learning Spaces

Virtual Labs

Distance Learning

Lecture Capture

Smart Security

Video surveillance

Smart locks and access control

Tracking assets

Tracking people

- **Connectivity to People**
- **Connectivity to Information**
- **Efficiency**
- **Security**
- **Save Energy**

Connectivity is important

802.11AX – Not just speed

Designed for High Efficiency, Density , Huge IOT connections

How is efficiency achieved by OFDMA?

Today's network

How is efficiency achieved by OFDMA?

Tomorrow's network (11ax)

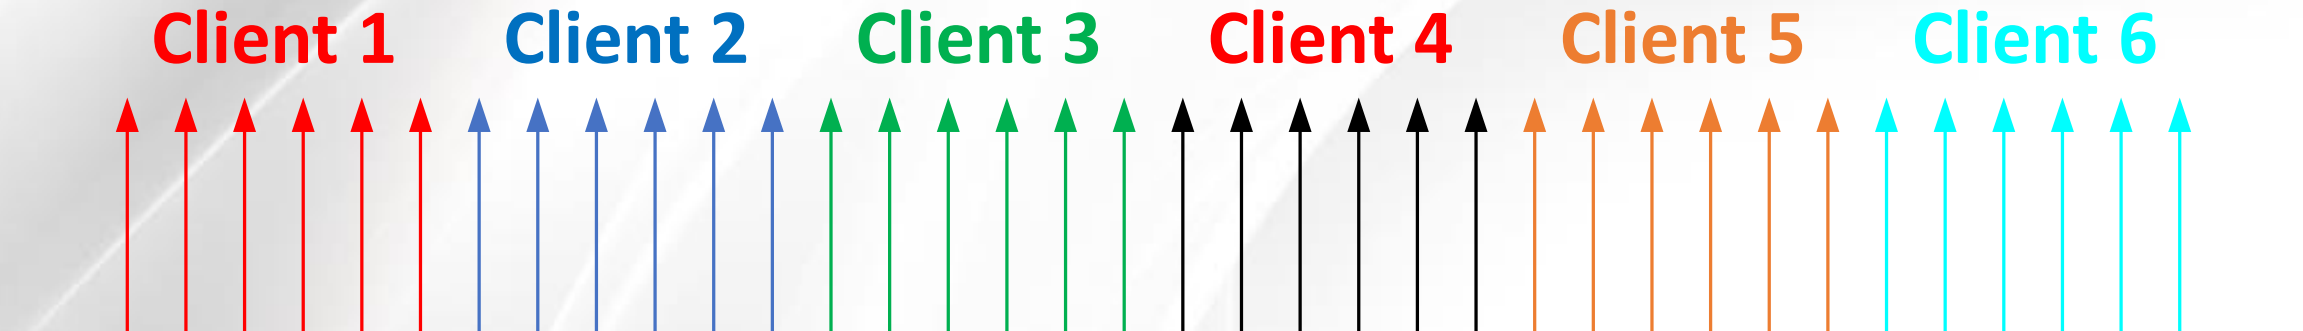

OFDM vs. OFDMA (802.11ax) – Better Spectrum Utilization

OFDM in 802.11ac

All Tones Assigned to Single Client

OFDMA (Resource Units RU)

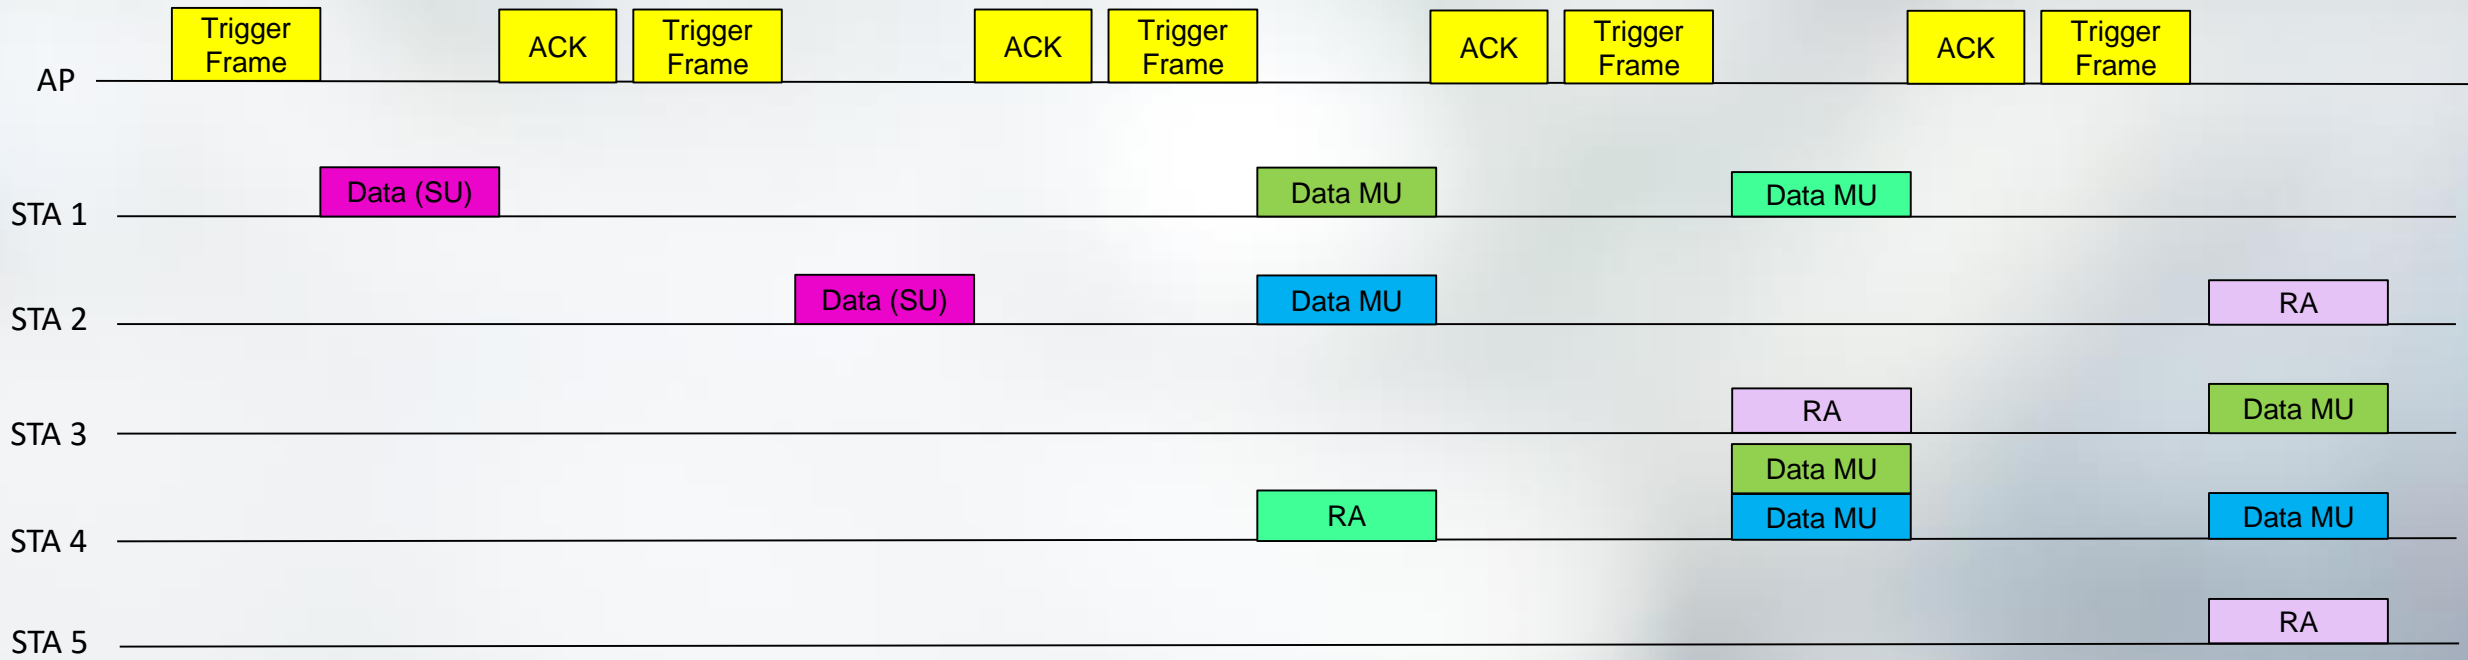

How is efficiency achieved?

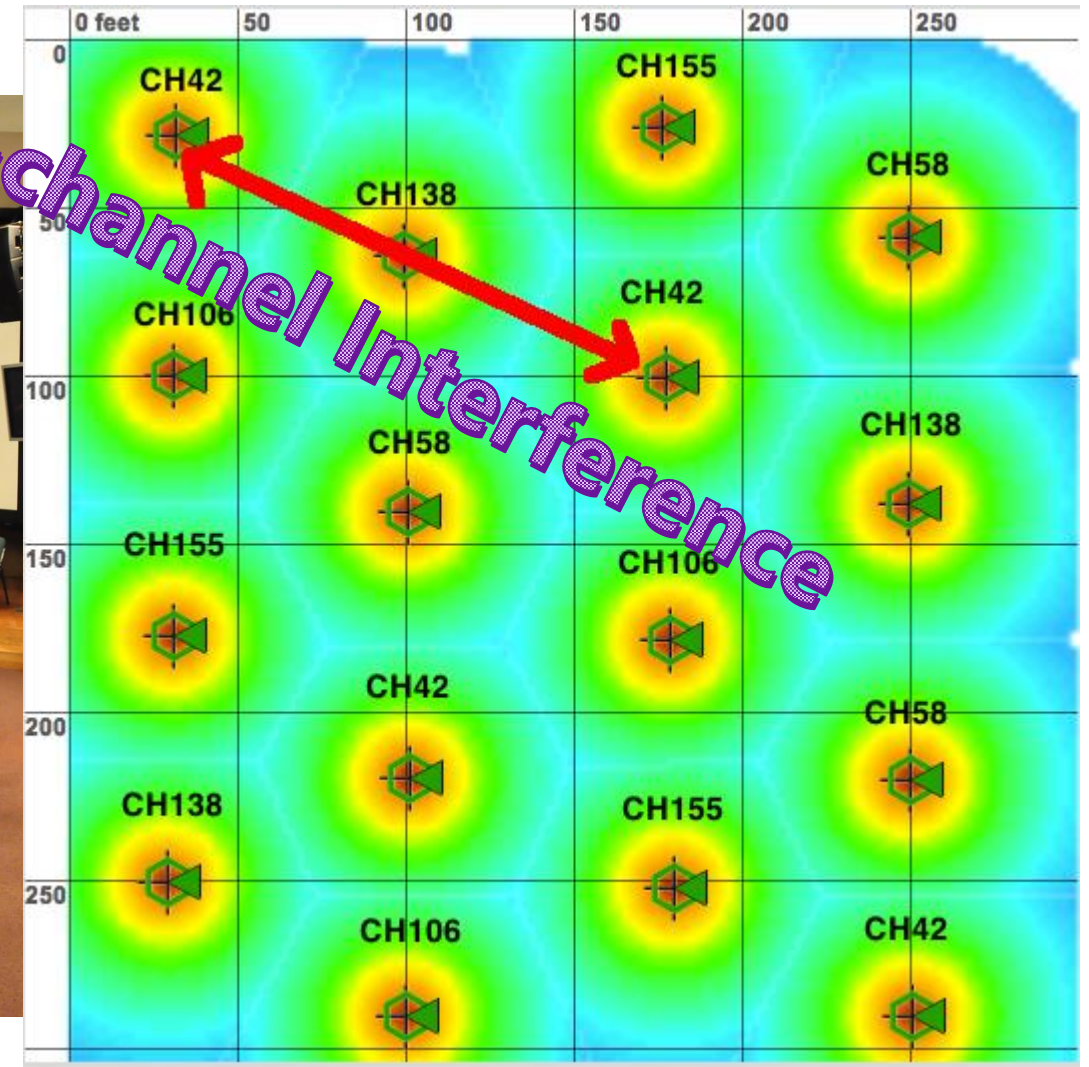

**Contention Based
(CSMA/CA)**

Today's network

OFDMA Scheduled Access

Lecture Theater – High density and high ceiling

BSS Coloring - High Density

R730 – Indoor 8x8 802.11ax Wi-Fi Access Point

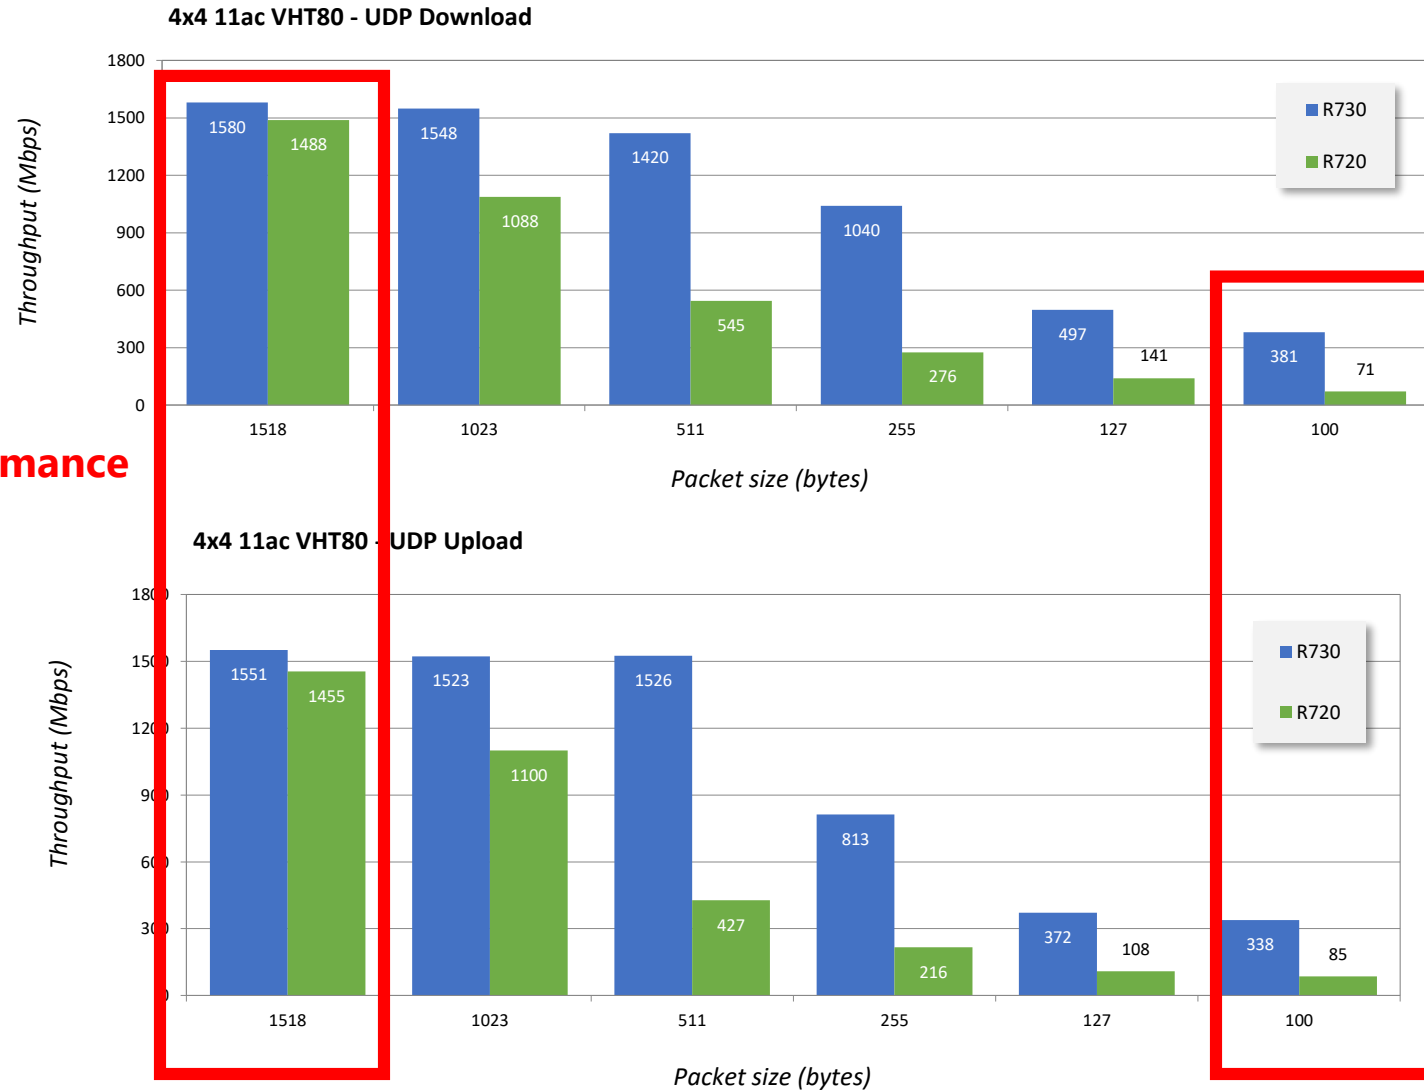

Highlights

- Dual band concurrent access point
- 2.4 GHz radio: 4x4:4 802.11b/g/n/ax
 - 1148 Mbps max PHY rate
- 5 GHz radio: **8x8:8** 802.11a/n/ac/ax
 - 4800 Mbps max PHY rate
- Multi-User MIMO support
- Orthogonal Frequency Division Multiple Access (OFDMA)
- 160 / 80+80 MHz channel support
- BeamFlex+ adaptive antennas with Polarization Diversity (PD-MRC)
- **IoT Ready: BLE & Zigbee**
- **Up to 1024 client associations**
- **WPA3 ready**
- 1x 1/2.5/5Gbps and 1x 10/100/1000 Mbps Ethernet Ports

Wifi6 vs wifi5 -Small Packet Performance (single client)

Small-packet performance of R730 is more than 5 times that of R720 with 100 byte packets

**Large packet performance
Are similar**

**Download speed:
381Mbps vs 71Mbps
Five times!!!**

**Upload speed:
338Mbps vs 85Mbps
Near four times!!!**

Highlights

- Dual band concurrent access point
- 2.4 GHz radio: 2x2:2 802.11b/g/n
 - 400 Mbps max PHY rate
- 5 GHz radio: 2x2:2 802.11a/n/ac Wave 2
 - 866 Mbps max PHY rate
- Field-accessible USB Port for IoT radios e.g. BLE
- Up to 512 client associations
- IP67 Outdoor Rating
- -40 to +70C Operating temperature
- Rail certified EN 50155
- Embeddable form-factor

+

1. Video cam – AI to analyze people
2. BLE/WIFI
3. Temp., humid, wind speed
4. Smart LED
5. Geo-QR code
6. RFID Cane navigation

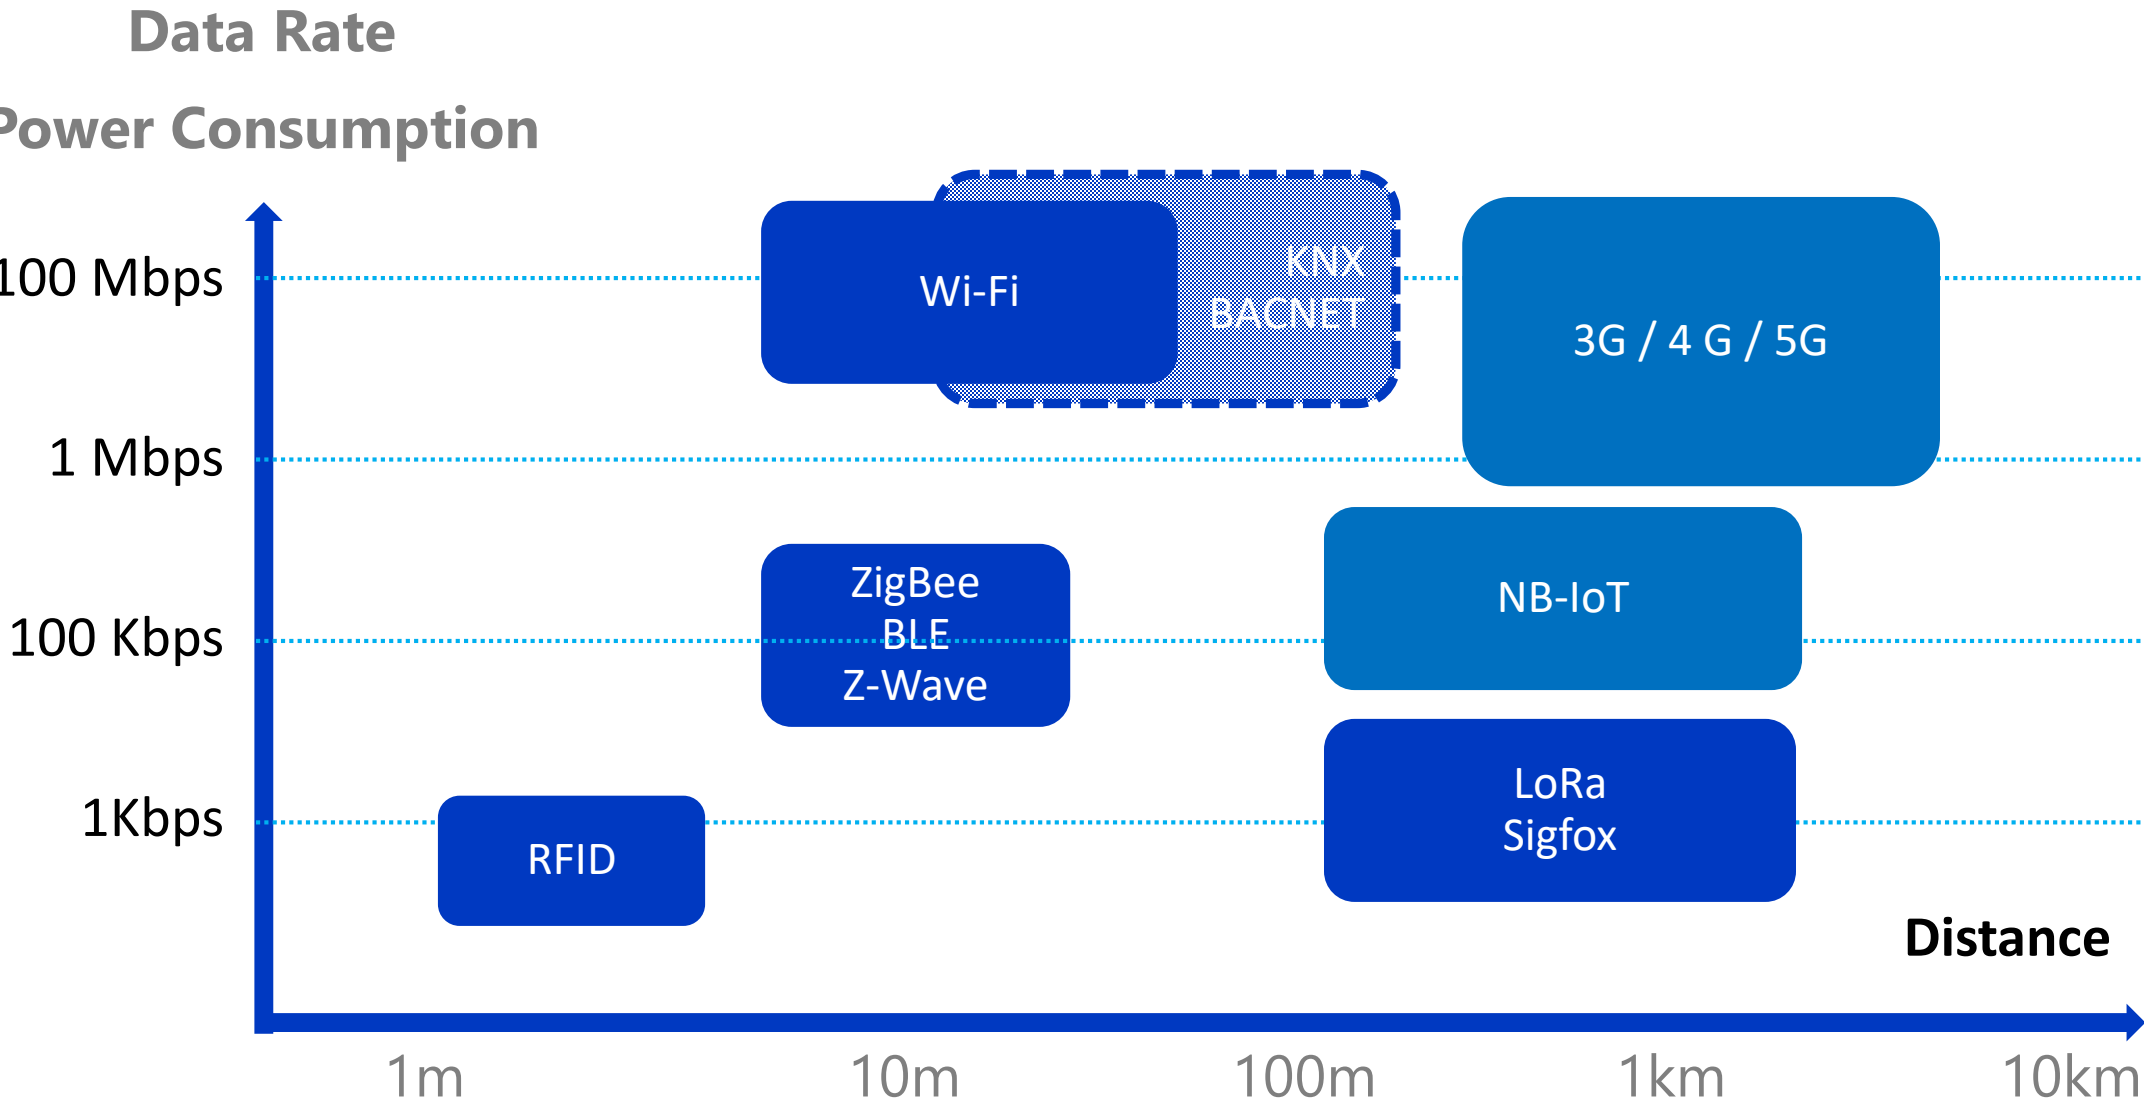

E510

**Today's networks have different performance, latency, and power requirements.
It's no longer monolithic Wi-Fi.**

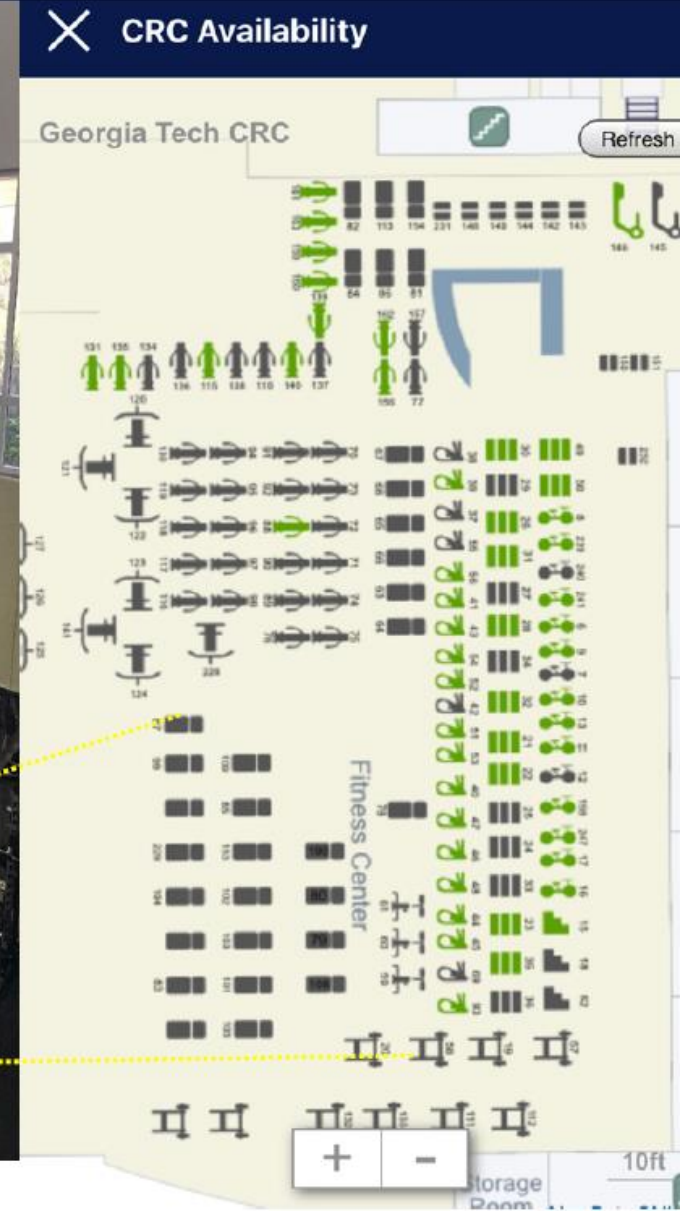

IoT Technology Overview

1. Smart Spaces - IoT network deployed in the Campus Recreation Centre delivers real time visibility and availability of equipment and space to both students and staff.

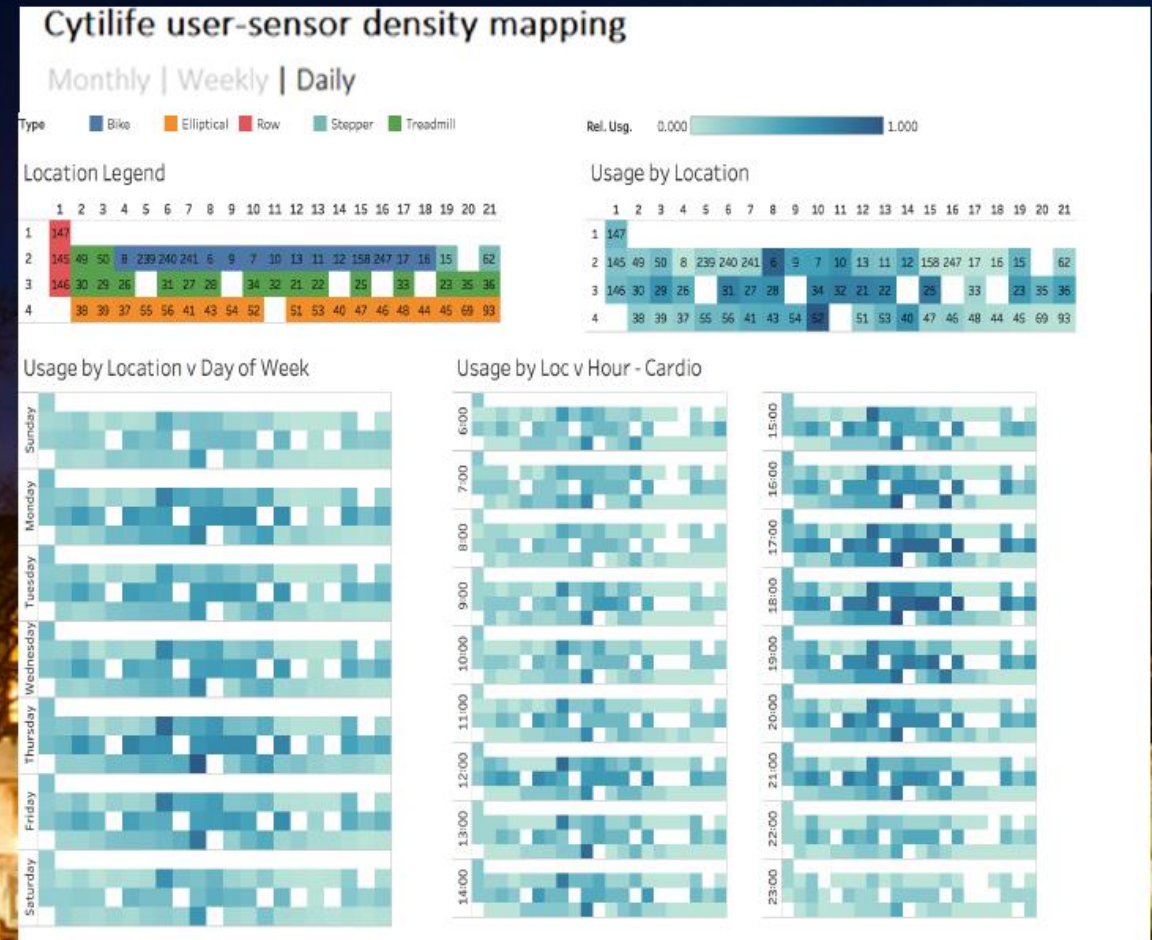

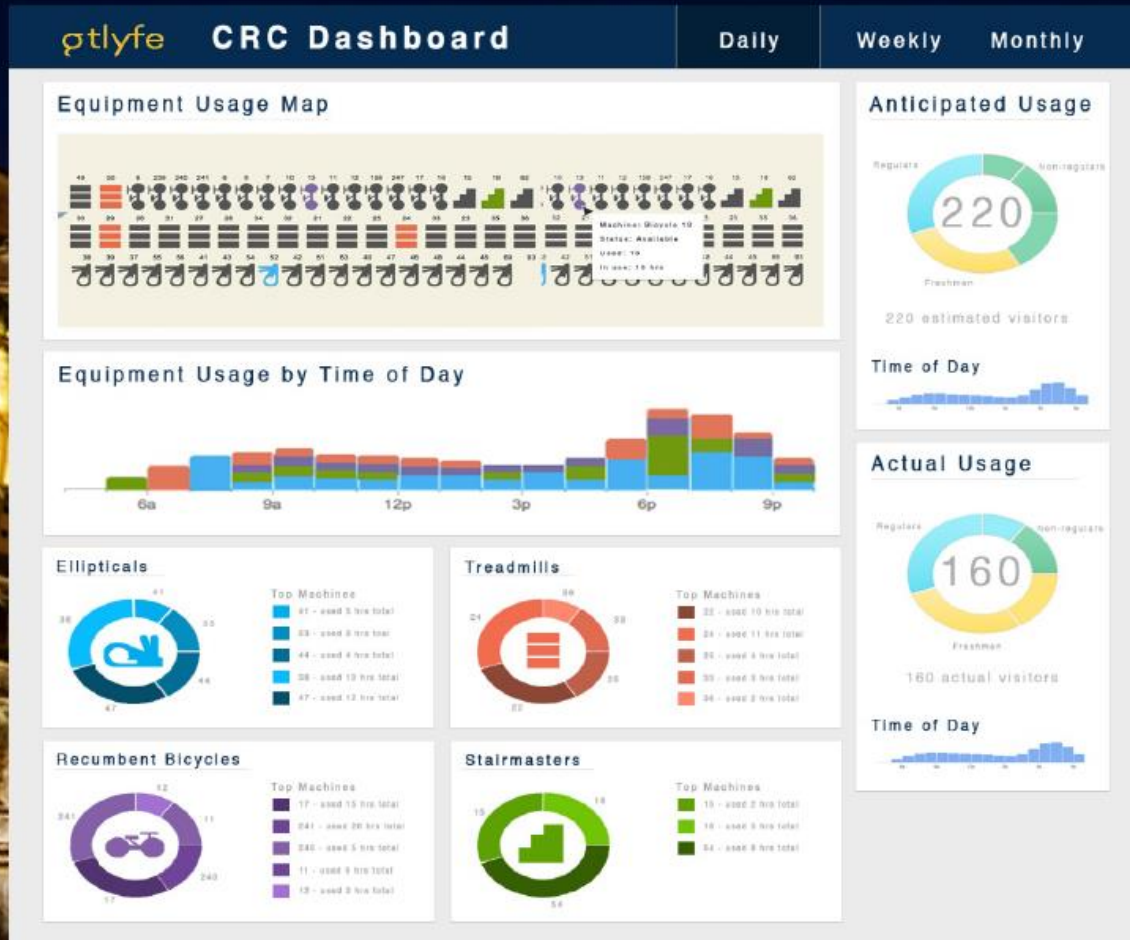

Live @Georgia Tech

2. Smart Decisions – Real time data and predictive insights on student behavior and infrastructure utilization provided to Rec Center staff via a web and mobile portal.

ACTUAL DATA DASHBOARDS FOR GEORGIA TECH

Access Network Silos

Separate Networks for Wi-Fi and IoT

- Possibly per IoT device vendor

Larger Physical Infrastructure

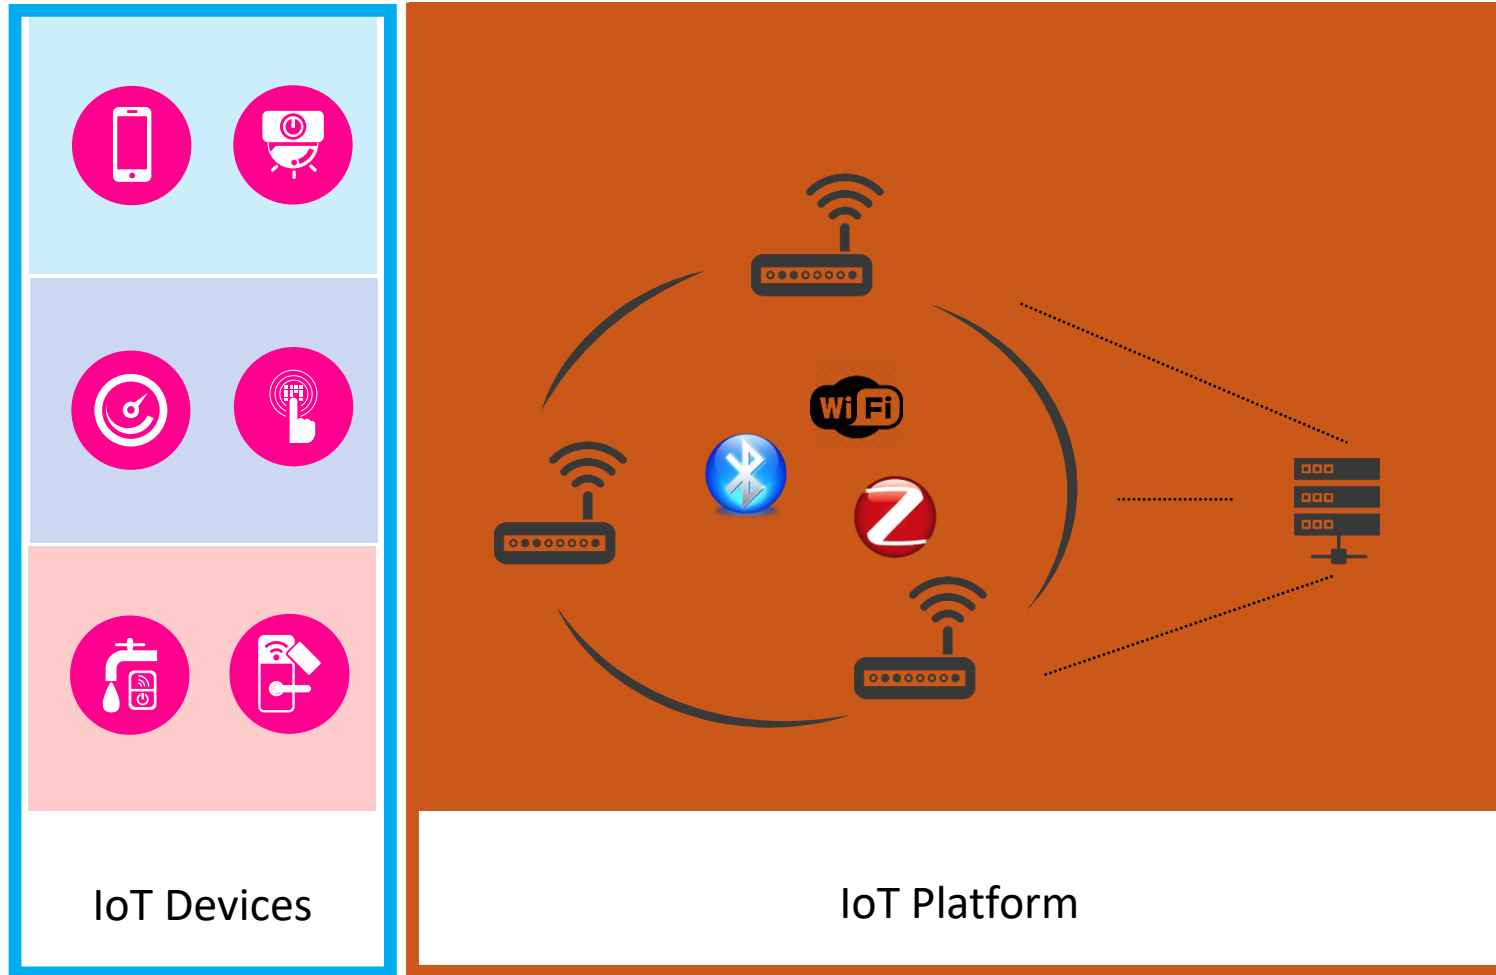

- More switches, switch ports, cables

Complex Network Management

- Burdensome Security Policies

High Costs Resulting in Questionable ROI

Converged IoT Access Network

- IoT Enabled Wi-Fi Access Points
- Reduced Physical Infrastructure
 - Less switches, switch ports, cables
- Single Network Management

Ruckus IoT-Enabled APs

Unified Transport

Wi-Fi, Zigbee, BLE supported by
Single Network

Coexistence by design

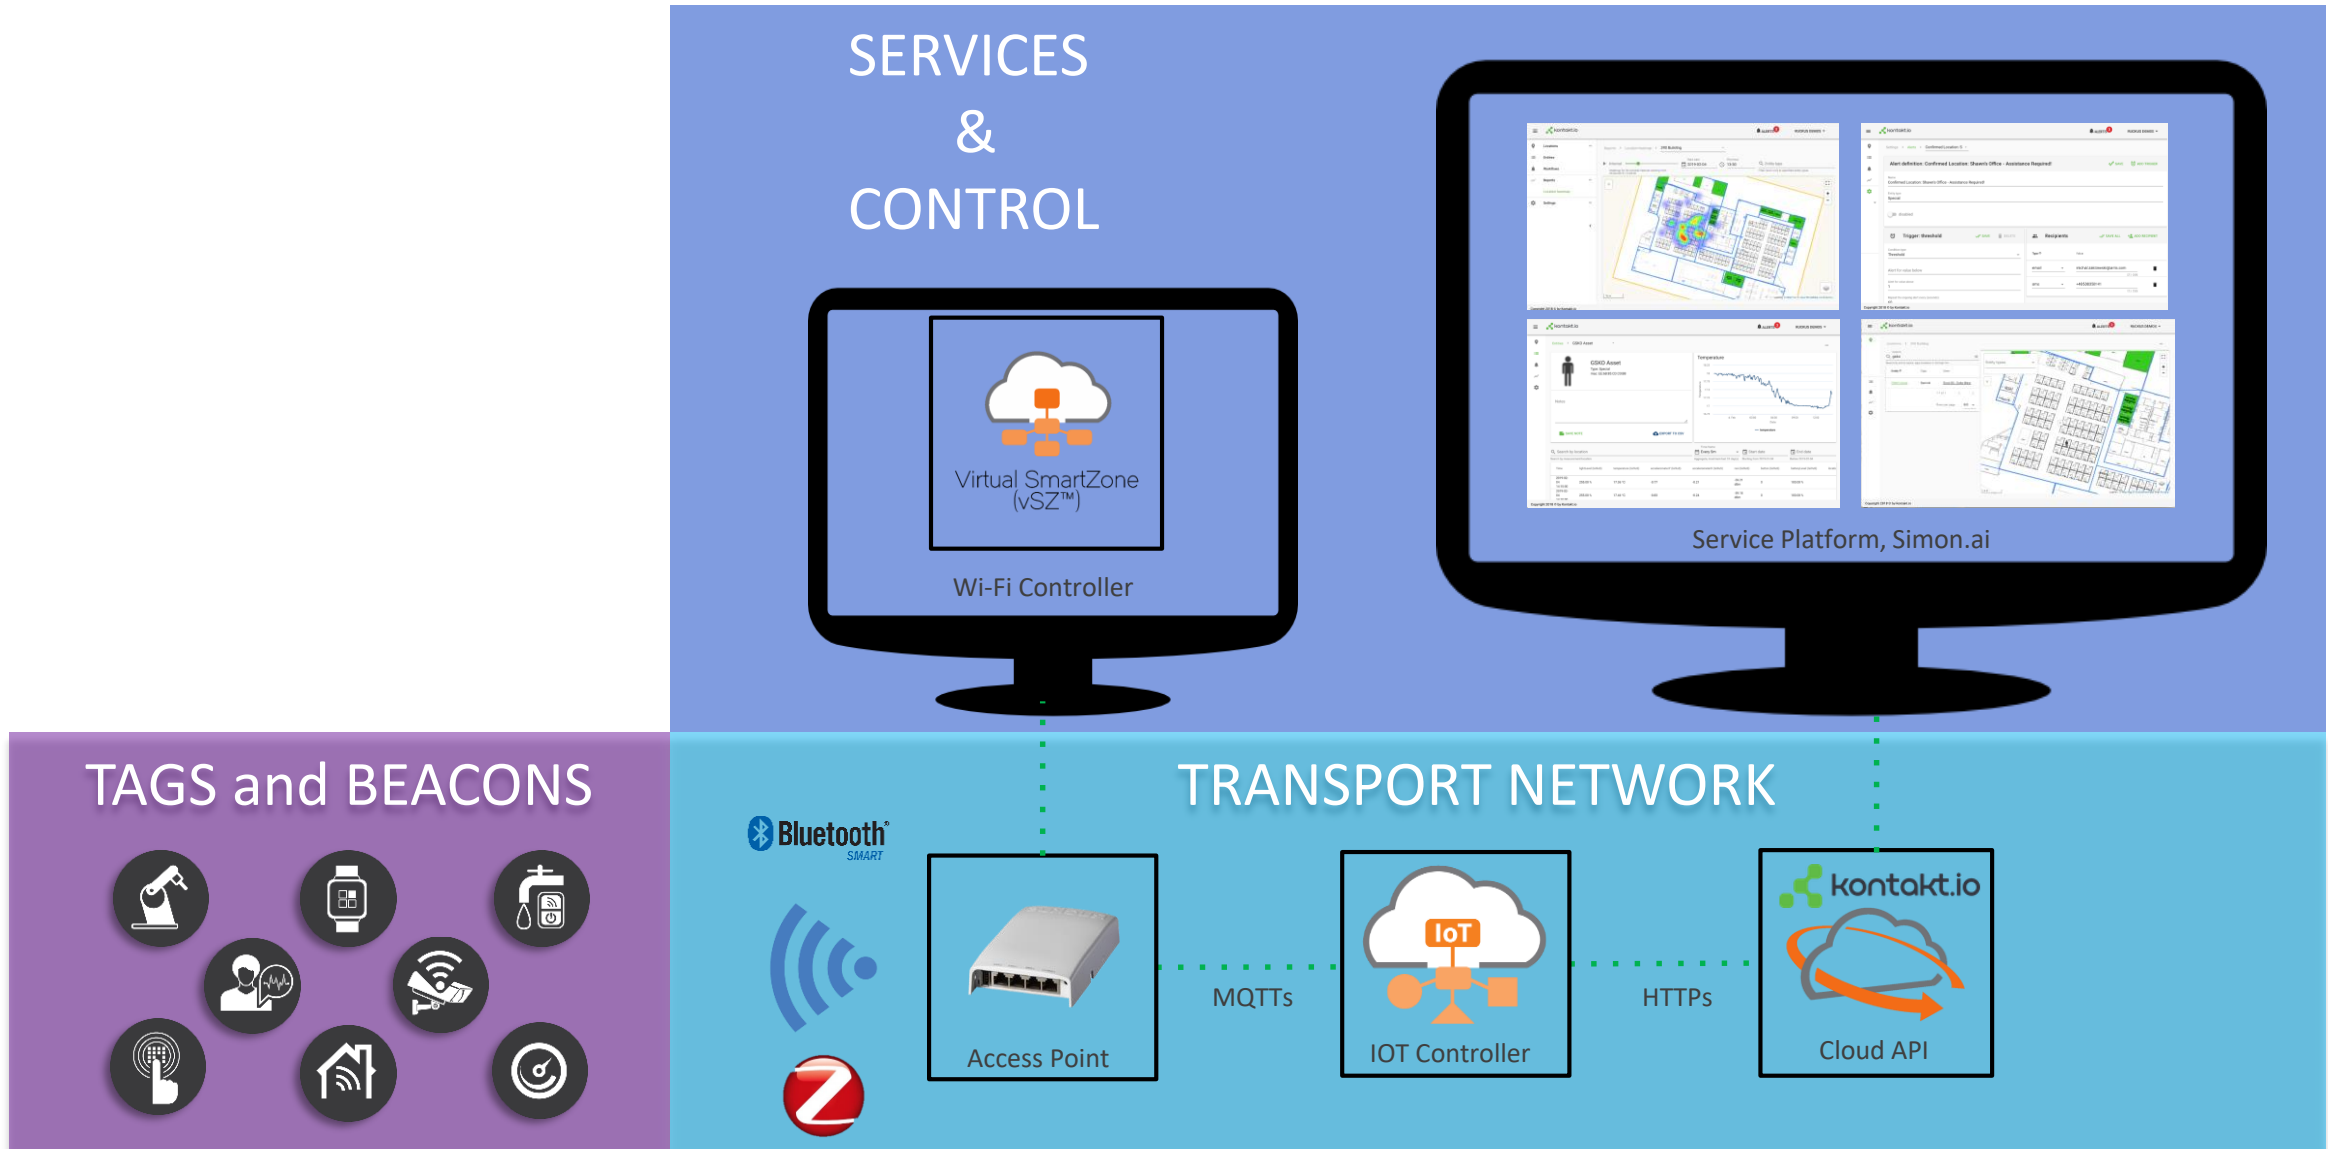

Data Abstraction

Normalize IP and non-IP data for
northbound communication

Service Architecture

API calls using Node-Red Rules Engine

The screenshot displays the Node-RED web interface with three active flows:

- Flow 1: API call to read device information of IoT Controller**
Nodes: timestamp → function (device list) → http request → msg.payload (output).
- Flow 2: Simple Logic to Change Lock/Bulb state**
Nodes: timestamp → function (Yale LOCK) → http request → function (Bulb OFF) → http request.
- Flow 3: Simple Logic to Change Lock/Bulb state**
Nodes: timestamp → function (Yale UNLOCK) → http request → function (Bulb ON) → http request → function (Bulb Colour) → http request.

The right sidebar shows the debug console with the following JSON payload:

```
blacklisted: false
lqi: 113
last_seen: 1535961368
device_capability: object
  DOOR_LOCK: object
    attributes: object
      LOCK_STATE: object
        reported_value: object
          lock: 1
        configured_value: object
          lock: 1
    rssi: -66
    device_type: "DOOR_LOCK"
  device_tags: array[2]
  gateway_euid: "34:FA:9F:10:F5:F0"
  3: object
  meta: object
```

Below the JSON, the debug console shows the timestamp and the msg.payload object structure.

Summary for Higher Education

Cloudpath

- Pre-boarding for 'Move-in Day'
- No password tyranny
- 24/7 self-service portal
- eduroam made easier
- Migration tool to Ruckus
- Secure IoT

SmartZone

- Push troubleshooting to edge
- No more wireless captures!!
- Powerful mapping tool
- APIs for IT tool development and engagement solutions

IoT

- Smart ID Cards
- In-building LTD
- Smart Lighting
- Smart parking/transit
- Wayfinding
- Personal networks
- IPTV

Access Points

- H510 for ResHall and IPTV
- Best outdoor APs available!
- Fewer APs per deployment
- BeamFlex+

ICX Switches

- Best performance value
- Campus Fabric easy to manage
- Small campus datacenter
- Long distance stackable

Open G

- Lower TCO than traditional DAS systems
- Strong in-building LTE connectivity
- More secure than a WiFi network

COMMSCOPE FAST FACTS.

TOGETHER WE HOLD
15,000
PATENTS 

**BROADEST
PORTFOLIO**

Choice for 
constant,
low-latency, and
